WDMET. See Wound Data and Munitions Effectiveness Team (WDMET)
Weapon noise, 242
Weapons development and wound severity, 95
See also Weapons of conventional land warfare
Weapons effectiveness, 53–80
distributed by weapon or projectile in Bougainville Campaign (1944), 58–60
1969.
and biophysics; Management of ballistic wounds of soft tissue

Wound ballistics: Physics and biophysics, 108–159

energy transfer in projectile-target interaction in tissue, 120–130

and projectile characteristics, 123–130
deformation, 126
fragmentation, 126
shape at impact, 123–126
stability, 126–129
velocity, 129–130
total energy transfer, 120–123
nonuniform energy transfer, 120–122
wound profile, 122–123
mechanisms of energy transfer in tissue, 130–136
cutting, 130
heating, 130, 136
pressure transients around temporary cavity, 135
stress waves, 135–136
stretch and shear, 130–135
determinants of cavity dimensions, 135
energetics of cavity formation, 131
gross characteristics, 131–135
temporary cavitation, 130–131

organ-specific wounds, 144–155
abdomen, 149–152
brain, 144–146
chest, 146–149
heart, 149
lungs, 146–149
extremities, 152–155
blood vessels, 154
bone, 152–154
nerves, 154–155
skull, 144–146

permanent cavity, 136–139, 140
projectile characteristics, 108–118

coefficient of drag, 113–114
drag, 112–113
kinetic energy, 111–112
mass, 108
shape, 108–111
stability, 114–118
velocity, 111

projectile penetration, 119
soft-tissue ballistic wounds, 139–142
pathomorphology, 140

permanent cavity, 140
zones of extravasation and concussion, 141–142
tissue damage, by debrided muscle, 142
Conventional Warfare: Ballistic, Blast, and Burn Injuries

Wound closure
- theoretical basis for, between wars. 93

Wound contamination
- anaerobic infections, 181–183, 210–212
- bacteriology. 178–188
- and environmental factors, 91, 95
  in soft tissue
    - mechanics, 167
    - type and magnitude, 167–170
  temporal relationship between, and invasive sepsis. 97–98
See also Infection; Management of ballistic wounds of soft tissue; Sepsis

Wound Data and Munitions Effectiveness Team (WDMET), Y5, 227
- and abdominal injury, 150–152
- and Computer Man, 75–76
- and lethality, 64–67
- and migrating projectile, 213
- and napalm casualties, 48
- and primary blast injury, 221
- and pulmonary injury, 149

and soldier behavior after wounding, 73
and weapons effectiveness, 57
and wound-tract morphology, 140

Wound management
- and kinetic energy, 95

Wound morphology
- and differing bullets, 188, 199–202

Wound profile, 122–123

Wound severity
- and kinetic energy, 95
- and weapons development, 95

Wound tract, 171–173
- and drains, 174

Wounded
- definition. 54

Wundexcision, totaler, 98

Xenograft, 339, 364
